

Homework — Week 8, Day 1

Due: __ · **GitHub PR**

Already done in lab (must stay green)

- Nil-pointer crash understood and fixed
- `StudentRepository` owns the map
- Handler calls repo for create / list / get
- Health still 200

Required homework

1. **PR** with handler → repository for all student routes you have (include update/delete if present).
2. **Memory diagram** in the PR description — notebook photo or ASCII showing `&x` / nil dereference.
3. `gofmt` clean; no secrets; no Postgres/JWT.
4. README one paragraph: why handlers no longer hold the map.

Stretch

- Repo returns `error` ; map missing → a sentinel `ErrNotFound` ; handler maps to 404
- `go test` on repository Create + GetByID

Marking

Check	Pass
Routes still work	
Map not on handler	
Repo package has no <code>gin</code>	
Memory diagram in PR	
Evidence / screenshots
