Troubleshooting — Week 12

Symptom	Likely cause	Fix
`-race` needs cgo	CGO_ENABLED=0	`CGO_ENABLED=1 go test -race ./...`
`cgo: C compiler "gcc" not found`	No gcc	`sudo apt-get install -y build-essential`
Still races with WaitGroup	WaitGroup is not a lock	Add `sync.Mutex` around shared data
Deadlock	Forgot Unlock / locked twice	`defer mu.Unlock()` right after Lock
Timeout demo never cancels	Ignoring `ctx.Done()`	`select` on `ctx.Done()` in the wait
Shutdown hangs	In-flight request blocked	Shorten demo sleeps; use Shutdown timeout

Room walk: “Does WaitGroup stop a data race?” — answer must be **no**.
