Mutex, context, and races

Channels move work. Mutexes protect data. Context cancels work. Prove it with `go test -race`.

Remember

```
mu.Lock()
defer mu.Unlock()

ctx := c.Request.Context()
s, err := h.repo.GetByID(ctx, id)

go test -race ./...
```

Lab

```
cd starter/race-lab
CGO_ENABLED=1 go test -race ./counter/   # expect FAIL first
# add Mutex → green
CGO_ENABLED=1 go test -race ./...
```

Homework

README documents `go test -race ./...`. PR explains red → green.
