

Homework — Week 1, Day 1

Due: **before the next session** (instructor: fill date __).

Submit in the **same GitHub repo** as `hello.go`. No zip files, no WhatsApp screenshots-only.

1. `why-go.md`

Copy [why-go.template.md](#) to `why-go.md` in your repo. Write **in your own words**, about **half a page** (120–200 words).

Answer:

- What is the difference between programming and software engineering?
- Why is Go a good fit for the Student Management System we will build from week 4?
- Name two toolchain commands you used today and what they are for.

If you cannot explain a sentence without the slides open, delete it and write a shorter one you can defend.

2. `go version` proof

In the terminal:

```
go version
```

Either:

- save a screenshot as `go-version.png` in the repo, **or**
- paste the exact output into the bottom of `why-go.md` in a fenced code block.

It must show **go1.25**.

3. Optional stretch

Change the printed message to include your name, `gofmt`, commit, push. Commit message example: `Personalise hello message`.

How it is checked

Requirement	Pass
Repo URL sent	Yes
<code>hello.go</code> runs	Hello, Epic Learn (or your name)
No compiled <code>hello</code> binary in the repo	<code>.gitignore</code> working
<code>why-go.md</code> is your words, not a paste from ChatGPT you cannot explain	Oral question next class
<code>go1.25</code> visible	Screenshot or pasted output
