

Instructor checklist — Day 1

Pack / prepare the night before

- [] Slides open locally (`docs/slides/week-01-day-01.html`) — do not depend on GitHub in the room
- [] HDMI / dongle, presenter remote, markers, board
- [] USB stick with the **Go 1.25 linux-amd64 tarball** from <https://go.dev/dl/> (wifi will fail for someone)
- [] This folder printed or on a second window: troubleshooting + lab sheet
- [] Your own `hello` repo already pushed (so `git push` demo cannot fail)
- [] GitHub org or “add collaborator” plan for this batch
- [] Student URL sheet below (or a Google Form)

On the board (leave up all day)

SE loop: `requirements` → `design` → `implement` → `test` → `review`

Git: `working tree` → `stage (add)` → `commit` → `GitHub (push)`

Export: `Println` (capital P) not `println`

During lab

Walk the room. Pair done students with stuck students. Typical: PATH, apt Go, format-on-save off, binary committed, PowerShell instead of WSL.

Collect before they leave

#	Student name	GitHub URL (<code>hello.go</code> visible)	go version OK
1			
2			
3			
4			
5			

#	Student name	GitHub URL (hello.go visible)	go version OK
6			
7			
8			
9			
10			
11			
12			
13			
14			
15			

After class

- [] Message the batch: homework due date + link to `homework.md`
- [] Spot-check 3 repos: no `hello` binary, `gofmt` looks clean
- [] Note who still has no GitHub for next session's first 10 minutes
