Homework — Week 11, Day 1

Due: _____ · **GitHub PR**

Already done in lab

- Worker pool kata with fixed N
- Understood who closes `jobs` / `results`

Pick one

Option A — Import API

`POST /api/students/import`
- Body: JSON array of students
- Pool of N workers validates + inserts (in-memory)
- Response: `{ "created": n, "failed": m }` (errors optional)

Option B — Documented kata

- Pool under `backend/internal/workers/` (or keep `worker-lab`)
- README: N, job type, who closes which channel
- Note: delete before production if unused

Marking

Check	Pass
Fixed N workers	
Job channel (not go-per-item)	
Close ownership correct	
PR explanation
