Troubleshooting — Week 11

Symptom	Likely cause	Fix
`range` hangs	Channel never closed	Sender closes after last send
Panic: send on closed channel	Closed too early / wrong owner	Only producer closes
Panic: close of closed channel	Multiple closers	One closer only
Results missing	Closed `results` before workers finished	`wg.Wait()` then close
“Pool” still races map	Concurrent map writes	Week 12 mutex; or single writer goroutine
Import 400 always	Bind expects object not array	`[]CreateStudentRequest`

Room walk: “How many goroutines per 10k jobs?” — answer must be ~N workers, not 10k.
