

# Instructor checklist — Week 3, Day 1

## Pack / prepare the night before

- [ ] Slides open locally ( `docs/slides/week-03-day-01.html` ) — do not depend on GitHub in the room
- [ ] HDMI / dongle, presenter remote, markers, board
- [ ] Printed worksheet + lab sheet (one each per student)
- [ ] Your own `~/epic-go/week03` already working: `control.go` , `slices.go` , `freq.go` , `slicekit` with green `go test`
- [ ] Week 2 leftover list: who still had red `FullName` tests
- [ ] Student URL sheet below (or a Google Form)

## On the board (leave up all day)

```
if cond { }      braces required; cond is bool
for { }          only loop keyword
range           i, v := range xs

slice header:    ptr len cap
append:          s = append(s, x)      always assign
gotcha:          subslice may share backing array

map:             m = make(map[K]V)
comma-ok:        v, ok := m[k]
```

## During lab

Two labs. Lab 1 ( `Contains` + `Unique` ) before Lab 2 ( `Freq` ). Force paper test tables before coding.

Pace valve: skip variadic/closures live typing if slices ate time. Never skip the backing-array demo or comma-ok.

Typical: forgot `s = append(...)` , nil map write, asserting map print order, `Unique` that sorts or drops first occurrence.

## Collect before they leave

| #  | Student name | GitHub URL ( week03 visible) | Worksheet | Paper table | go test OK |
|----|--------------|------------------------------|-----------|-------------|------------|
| 1  |              |                              |           |             |            |
| 2  |              |                              |           |             |            |
| 3  |              |                              |           |             |            |
| 4  |              |                              |           |             |            |
| 5  |              |                              |           |             |            |
| 6  |              |                              |           |             |            |
| 7  |              |                              |           |             |            |
| 8  |              |                              |           |             |            |
| 9  |              |                              |           |             |            |
| 10 |              |                              |           |             |            |
| 11 |              |                              |           |             |            |
| 12 |              |                              |           |             |            |
| 13 |              |                              |           |             |            |
| 14 |              |                              |           |             |            |
| 15 |              |                              |           |             |            |

## After class

- [ ] Message the batch: homework due date + link to `homework.md`
- [ ] Spot-check 3 repos: `gofmt` clean, `go test` green, no binaries committed
- [ ] Note who cannot explain the slice gotcha — first 5 minutes of week 4
