

# Homework — Week 6, Day 1

Due: \_\_ · **GitHub PR** (refactor).

## Required

1. `internal/handlers` package with at least:
2. health handler ( `New...` + pointer method)
3. hello handler
4. `FullName(first, last string) string` with tests (trim; no extra spaces)
5. `cmd/server/main.go` mostly wires routes — not a paste of all JSON logic
6. `GET /health` and `GET /api/hello` still 200 on `:8080`
7. `go test ./internal/handlers` green
8. PR description: what moved and why (5–10 lines)
9. `gofmt` clean; no secrets

## Stretch

- `internal/routes` with `Register(r *gin.Engine)` called from `main`
- Table-driven tests for `FullName` (Ada/Lovelace, trim, empty last)

## Not required

JWT, Postgres, student CRUD, new endpoints.

## Marking

| Check                 | Pass |
|-----------------------|------|
| PR URL                |      |
| Handlers package real |      |
| Health unchanged      |      |
| FullName tests green  |      |
| Thin main             |      |

| Check                  | Pass  |
|------------------------|-------|
| Stretch routes package | bonus |
