Channels & worker pool

Learn the pool: fixed N workers, job channel, results channel. Import API is stretch.

Remember

```
jobs := make(chan Job)
results := make(chan Result)
for w := 0; w < N; w++ { go worker(jobs, results) }
// send jobs → close(jobs) → WaitGroup → close(results)
```

Lab

```
cd starter/worker-lab
go test ./...
go run .
```

Homework

Import endpoint *or* documented kata — explain who closes what.
