

Troubleshooting — Week 8

Symptom	Likely cause	Fix
<code>panic: runtime error: invalid memory address</code>	Nil handler or nil repo	<code>New...()</code> before <code>r.GET</code> ; check field assignment
<code>undefined: repository</code>	Missing import / package	<code>internal/repository</code> ; module path matches <code>go.mod</code>
Create works but list empty after extract	Two maps (handler + repo)	Delete map fields from handler; only use <code>h.repo</code>
Import cycle	Repo imports handlers	Never; repository must not know HTTP
<code>go: download go1.25 fails</code>	Toolchain mismatch	Use <code>go 1.22</code> in starter <code>go.mod</code> or set <code>GOTOOLCHAIN=local</code>
Tests fail randomly	Map iteration order	Sort by id in tests if asserting order

Room walk: ask “where does the map live now?” — answer must be repository.
