Homework — Week 9, Day 1

Due: _____ · **GitHub PR**

Already done in lab (must stay green)

- `ErrNotFound` from repo; missing student → 404 JSON
- Unexpected errors → 500 (not panic)
- Bind failures → 400

Required homework

1. Replace `fmt.Println` debugging with **`log/slog`** (`Info` / `Error` + attrs like `student_id`, `err`).
2. Add **`.env.example`** with `PORT` and `JWT_SECRET` placeholders. Keep `.env` gitignored.
3. Wire **`internal/config`** so the server port comes from env (default `8080`).
4. PR shows a sample JSON log line for a 5xx or create path.

Stretch

- `POST /api/register` (bcrypt, in-memory users)
- Login returns a JWT string (do not protect student routes yet)

Marking

Check	Pass
404 mapping still works	
slog used (no print spam)	
`.env.example` present	
`.env` not in git	
Evidence in PR
