Errors, validation, slog, JWT preview

Consistent `{"error":"..."}`. Map `ErrNotFound` → 404. Log 5xx with slog. No Postgres.

Outcomes

- Sentinel errors + `errors.Is`
- Never panic in handlers
- Gin binding → 400; slog on server failures
- Config from env; `.env.example` only in git

Mapping

```
errors.Is(err, ErrNotFound) → 404
bind / bad input            → 400
anything else               → 500 + slog.Error
```

Lab gate

- Missing student → 404 JSON
- No panics on student routes
- Health still green

Homework

slog everywhere you used Println. Add `.env.example` + config. Stretch: register/login.
