

Instructor checklist — Week 4, Day 1

Pack / prepare

- [] Slides local: docs/slides/week-04-day-01.html
- [] HDMI / remote / markers
- [] Printed lab sheet (one per student)
- [] Your own ~/epic-go/sms/backend already prints sms starting
- [] Week 3 leftover list: who still had red homework tests
- [] URL sheet below

On the board (leave up)

```
module = go.mod name / import prefix
package = one folder, one package clause
internal/ = app code (compiler boundary)
cmd/server = main only

go run ./cmd/server → sms starting

.gitignore must include .env
```

During lab

Walk the room. Typical: wrong directory for go run, missing .gitkeep, no go.mod, trying to add Gin early.

Pace valve: skip deep go get if scaffold runs long. Never skip .env gitignore.

Collect before they leave

#	Student	GitHub PR URL	sms starting	README	.env absent
1					
2					
3					
4					

#	Student	GitHub PR URL	sms starting	README	.env absent

7					
8					
9					
10					
11					
12					
13					
14					
15					

After class

- [] Message due date for unfinished PRs
- [] Spot-check 3 PRs: `gofmt` , `tree`, no secrets
- [] Note who has no GitHub collaborator invite for week 5
