

Pre-class (send 2–3 days before Week 2)

Copy, fill the date/room, send on WhatsApp / email.

Epic Learn — Go Programming Master Course — Week 2, Day 1

Bring a **working toolchain**. We will write types and a first test, not fight installs.

1. `go version` must show **go1.25.x**. If Day 1 never finished, come 15 minutes early or message me.
2. Homework from Week 1 in the same GitHub repo as `hello.go` :
3. `why-go.md` (your words)
4. `go version` proof
5. Laptop + charger. Same setup: **Ubuntu** lab, or **WSL2 Ubuntu** on Windows — not PowerShell.
6. Optional reading only: [Tour of Go — Packages, variables, and functions](#) — stop before “Flow control”. Do not skip ahead to slices.

Today's goal: variables, types, zero values, strings, and `go test` on `FullName`. The Student Management System still starts in **week 4**.

See you at [DATE] [TIME] [ROOM].
