Homework — Week 10, Day 1

Due: _____ · **GitHub PR** (quiz answers in the description or a `quiz.md`)

Already done in lab

- Saw `-race` DATA RACE on the counter
- Fan-out validation kata ran
- SMS create still synchronous

Required quiz (short answers)

1. Concurrency vs parallelism — one sentence each.
2. What does `go f()` do? Does it wait for `f` to finish?
3. Why must HTTP handlers not use a naked `go` for Create?
4. Name G, M, and P in the Go scheduler poster.
5. What command detects data races in tests?

Optional

If your in-memory student store can race under concurrent tests, paste `go test -race` output. **Do not require a mutex fix** unless you already know it — week 12.

Marking

Check	Pass
Quiz answers clear	
No naked `go` sneaked into Create	
Optional race evidence (if claimed)
