Goroutines and the scheduler

Start concurrent work with `go f()`. See a data race. Keep SMS Create synchronous.

Outcomes

- Concurrency vs parallelism
- GMP poster (G / M / P)
- `go test -race` literacy
- No naked `go` in HTTP handlers

Lab commands

```
cd starter/goroutine-lab
go test -race ./counter/     # expect DATA RACE
go test ./validate/          # fan-out checks
```

Course rule this week

Do not background Create with `go`. Client needs the result; maps will race (week 12).
