Troubleshooting — Week 10

Symptom	Likely cause	Fix
`-race` not available	Old Go / wrong toolchain	Use Go 1.22+; `go version`
No DATA RACE	Compiler optimized trivial case / too few iters	Use the provided counter lab as-is
Fan-out hangs	Forgot to signal done / closed wrong	Follow starter `ValidateStudentConcurrent`
Prints out of order	Expected	Goroutine scheduling is nondeterministic
Create “async” flakes	Naked `go` in handler	Remove it; keep sync (course rule)
Loop variable bug	`go func(){ use i }` without arg	`go func(i int){ ... }(i)`

Room walk: ask “may Create use go today?” — answer must be no.
