

Homework — Week 7, Day 1

Due: __ · GitHub PR

Already done in lab (must stay green)

- `models.Student` with JSON tags
- `POST /api/students` → 201
- `GET /api/students` → 200 array
- `GET /api/students/:id` → 200 / 404
- Bad JSON → 400

Required homework

1. `PUT /api/students/:id` — update fields; missing id → 404; bad JSON → 400
2. `DELETE /api/students/:id` — remove; missing → 404 (200 or 204 is fine — document it)
3. Postman (or curl) proof in the PR
4. `gofmt` clean; no secrets; no Postgres/JWT

Stretch

- Reject empty `first_name` / `email` even when JSON parses
- Return `full_name` using week-6 `FullName`
- Sort list by `id` ascending

Marking

Check	Pass
Lab routes still work	
PUT works	
DELETE works	
400 on invalid JSON
